

Physical Modelling and Simulation of Micro- and Nano-Structures

1. Electrostatic Field	
1.1. Introduction	1
1.2. Coulomb's Law; Electric Field; Gauss's Law	1
1.3. Scalar Potential	4
1.4. Electric Field in Material; Polarisation of Dielectric	6
1.5. Laplace's and Poisson's Equations	10
1.6. Electrostatic Boundary Value Problem	12
1.7. Graphical Representation of Electrostatic Field	13
1.8. Electrostatic Potential Energy; Electrostatic Force	15
1.9. Interface Conditions	17
1.10. References	19
2. Stationary Current Distribution	
2.1. Introduction	21
2.2. Electric Current Density	21
2.3. Continuity Equation	23
2.4. Boundary Value Problem of Stationary Current Distribution	24
2.5. References	25
3. Magnetostatic Field	
3.1. Introduction	26
3.2. Biot-Savart Law; Ampere's Law	26
3.3. Magnetic Flux Density; Source-free Character of Magnetostatic Field	28
3.4. Magnetic Force	29
3.5. Magnetic Scalar and Vector Potentials	30
3.6. Magnetostatic field in Materials; Magnetisation	32
3.7. Laplace's and Poisson's Equations	34
3.8. Magnetostatic Boundary Value Problem	35
3.9. Force and Energy in Magnetostatics	36
3.10. Interface Conditions	37
3.11. References	38
4. Electrodynamics and Maxwell's Equations	
4.1. Introduction	39
4.2. Faraday's Law	39
4.3. Maxwell's Equations in Vacuum	40
4.4. Maxwell's Equations in Macroscopic Media	42
4.5. Interface Conditions Over the Boundary Between Different Media	43
4.6. Time-Harmonic Fields	44
4.7. Wave Equations	44
4.8. "Retarded" Vector and Scalar Potentials	45
4.9. Poynting Theorem	48
4.10. Plane Wave in Perfect Dielectric	49
4.11. References	51

5.	Field Discontinuities, S-parameters and Lumped Element Representation	
5.1.	Introduction	52
5.2.	Kirchoff's Laws	52
5.3.	Capacitance, Inductance and Resistance	54
5.4.	Transmission Lines	57
5.5.	Scattering Matrix	61
5.6.	Extraction of Lumped Parameters from S-parameters	64
5.7.	References	66
6.	Finite Element Method (FEM) for Electromagnetics	
6.1.	Introduction	68
6.2.	Theoretical Background of the Finite Element Method	68
8.2.1.	Boundary Value Problem in 2D	68
8.2.2.	Equivalent Integral Form – Weighted Residual Method	69
8.2.3.	Finite Elements Discretization	70
6.3.	FEM Solution of 2D Laplace's Problem (Electrostatic Analysis)	75
6.4.	FEM Solution of 2D Helmholtz's Problem (In-plane Wave Propagation)	82
6.5.	FEM Solution of 2D Eigenvalue Problem	87
6.6.	Vector FEM in 2D	90
6.7.	FEM in 3D	96
6.8.	Time-domain FEM	102
6.9.	Concluding Remarks	104
6.10.	References	104
7.	Finite Difference Method (FDM)	
7.1.	Introduction	106
7.2.	Finite Difference Schemes	106
7.3.	Parabolic PDEs and FDM (2D Transient Thermal Analysis)	108
7.4.	Hyperbolic PDEs and FDM (2D In-plane Wave Propagation)	116
7.5.	Elliptic PDEs and FDM (2D Electrostatic Analysis)	121
7.6.	FDTD Algorithm (2D In-plane Wave Propagation)	125
7.7.	Finite Integral (FI) Technique	128
7.8.	Concluding Remarks	129
7.9.	References	130
8.	Finite Element Method (FEM) for Mechanics	
8.1.	Introduction	131
8.2.	Equations for 2D Solids	131
8.2.1.	Stress and Strain	131
8.2.2.	Generalized Stress-strain Expression – Hooke's Law	133
8.2.3.	Dynamic Equilibrium Equations	135
8.2.4.	Boundary Conditions	136
8.3.	FEM Discretization	136
8.4.	FEM Static 2D Analysis of Capacitive MEMS Switch	139
8.5.	FEM Eigenvalue 2D Analysis of Capacitive MEMS Switch	142
8.6.	Concluding Remarks	143

8.7. References	146
9. Finite Element Method (FEM) for Thermal Analysis	
9.1. Introduction	147
9.2. Fundamental Laws of Heat Transfer	147
9.3. Heat Transfer Equation	148
9.4. Heat Transfer Boundary Value Problem (BVP)	150
9.5. Transient 2D Thermal Analysis of Micro AC/DC Thermo-Convertor	151
9.6. Concluding Remarks	154
9.7. References	154
10. Electromagnetic Compatibility in Micro- and Nano-Structures	
11. Coupled Fields Analysis (Electromagnetic-mechanical Coupling)	
11.1. Introduction	156
11.2. Fields Coupling Between Electromagneti and Mechanics	156
11.3. Coupled Fields Analysis in Shunt Capacitive MEMS Switch	157
11.4. Parameters of Convergence	161
11.5. Concluding Remarks	162
11.6. References	162
12. Multiphysics Domain Compact Modelling
