

Numerical Optimization: Inspiration from Nature

Christian Hafner

Crystallization – Simulated Annealing

Thermodynamics: Trend to increased disorder
Ordered structures: Miracle – not yet destroyed – or ???
Crystals: Increased order with reduced total energy!
Why do we not see big crystals everywhere?

Evolution – Evolution Strategies etc.

EUROPE

AMERICA

JAPAN

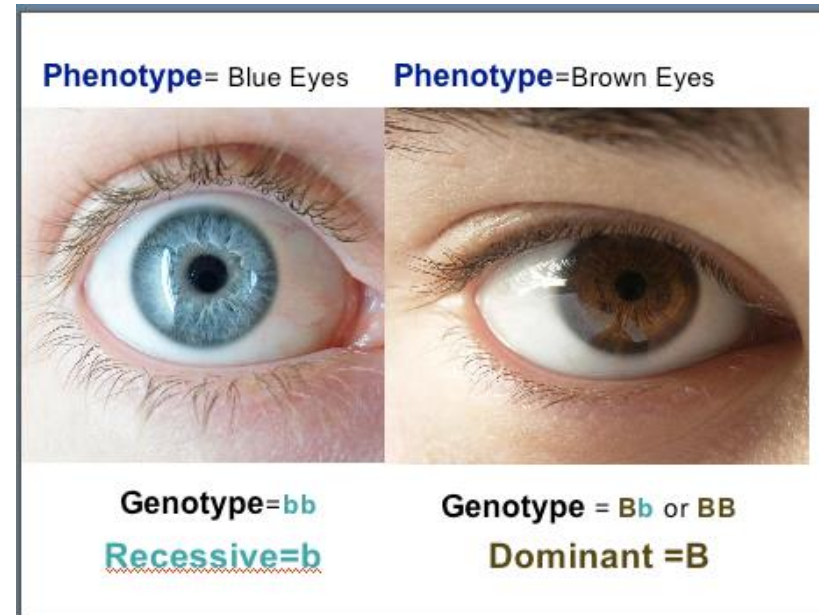

Pure chance would never create plants and animals – driving force?

Darwin: Recombinations, mutations, selection: survival of the fittest

Is evolution an efficient strategy to increase fitness?

Will robots be a next step in evolution?

Genetics – Genetic Algorithms, Genetic Programming

Mechanism behind evolution: Genetics – genotype/phenotype

Close to binary representation of objects in computers

Do genes speed-up evolution? Is sexual reproduction beneficial?

Collaboration of ants – Ant Colony

Collaboration helps some animals (+ hopefully humans) to be more powerful

Why are not all animals collaborating?

Will selfish animals survive in the long term?

E.g., ants or spiders?

Swarms – Particle Swarm Optimization

What are swarms good for?
Is this a good search strategy?

Brain – Artificial Neural Networks

Huge differences between brain and CPU

Brain is efficient for pattern recognition, prediction, etc.

Has the ability to learn

Consists of many neurons that are organized in a huge network

How to mimic a brain in a computer? – Good for optimization?
